##
##
##
##
```

```
### The above values represent the summary for the 'Carseats' dataset.
### This dataset contains a total of 400 observations.
```

```
max(Carseats$Advertising)
```

```
## [1] 29
```

```
### The above value represents the maximum value of the advertising attribute.
```

```r
IQR(Carseats$Price)
```

```
## [1] 31
```

```r
### The above value represents the Interquartile Range for Price attribute.
```

```r
plot(Carseats$Sales,Carseats$Price, main = "Current Pricing Sales", xlab="sales" , ylab="price")
```

```r
### The above is the representation of scatter plot for sales against price from the Carseats dataset.
```

```r
correlation <- cor.test(Carseats$Sales,Carseats$Price,method = "pearson")
correlation
```

```
##
##  Pearson's product-moment correlation
##
## data:  Carseats$Sales and Carseats$Price
## t = -9.912, df = 398, p-value < 2.2e-16
## alternative hypothesis: true correlation is not equal to 0
## 95 percent confidence interval:
##  -0.5203026 -0.3627240
## sample estimates:
##        cor
## -0.4449507
```

```
### The above value is the Pearson Correlation coefficient for the Sales and Price attributes, represen
```
